

Machine for the **forming, filling and sealing of bags**, from polyethylene / polypropylene coil, for granular and also powdery products such as aggregates, dry mortars, etc. It enables continuous production that automates the three bagging processes: bag formation, filling and sealing.

The film is taken from a reel and is formed around the vertical tube. The length of the bag is made by means of markings (printed plastic) or by means of an encoder. Sealing by thermo-welding is done after weighing.

MAIN ELEMENTS

- ✓ Steel bag former.
- ✓ Horizontal and vertical welding groups.
- ✓ Cold-rolled profile frame and sheet steel.
- ✓ Automatic coil end detection.
- ✓ Horizontal welding controlled by servo motor.
- ✓ Transmission area and film drag.

SOFTWARE ARCO DIAMOND PACKAGING

Program designed to control ECF continuous bagging machines.

The main features of the program are:

- ✓ SCADA animated by touch screen.
- ✓ Monitoring of the status of the bagging machine.
- ✓ Production control.
- ✓ Monitoring from a Web browser, Smartphone or tablet.
- ✓ Control of an ECF bagging machine and configuration of a previous scale with AE2-4210 equipment.
- ✓ User administrator through password and group management.
